

Pixel RPG Editor

Atlas-first layout exploration · Adwaita widgets · GNOME
OverlaySplitView pattern. Welcome screen, editor layouts across
mobile / tablet / desktop.

DESIGN REVIEW · MAY 21, 2026

SECTION

Welcome screen

The editor's home view when no project is open. Replaces the original Maker's modal (generic controller icon + Create/Open) with an Adwaita placeholder page: the project's own compass-rose mark, a Recent Projects boxed list (one-click resume — the biggest UX win), and a Start-from-Template strip. Lives inside real window chrome, not a floating modal.

Welcome to Pixel RPG Editor

Create a new world, or pick up where you left off. Your maps, sprites, and scripts live in one tidy project file.

5-minute walkthrough of the editor

SECTION

Editor layouts

Atlas-first layout with an Adwaita OverlaySplitView-style sidebar (hide / show via the toggle in the header), context inspector (bottom sheet on mobile), and floating tools / zoom / chips on every viewport. Theme adapts to your OS.
